YOUR NUMBER ONE **SECURITY PROVIDER**

GUARD & LONE WORKER SECURITY.

You'll never be left guessing the whereabouts of your staff again.

SOS

TRACK ME

CHECK IN

QUICK RESPONSE, AND IS EASY TO USE.

WHAT IS **webeyeSOS**?

webeye**SOS** is the most cost effective, secure and reliable cloud based guard & lone worker tracking & monitoring system on the market. webeye**SOS** is an app downloaded to a smart phone that tracks and monitors the users whereabouts. Once triggered it sends an alarm to any number of other smart phones enabled with the webeye**CMS** alarm handling and management app.

SOS devices/apps are critical to anyone who may at times be in a vulnerable situation or position of risk and the integrity of the device is paramount to the safety of the user.

SAFETY FEATURES

TRACK ME : Allows you to monitor and track the movements of your staff. Once they reach a site they press the track me button enabling you to follow their route in real time and verify their actions.

YOUR NUMBER ONE **SECURITY PROVIDER**

webeye**SOS** is the first product of its kind that, app side, exceeds the stringent British standards institute BS8484 producing the best solution possible both in the protection and risk limitation of a potential user.

This fast and reliable robust application will become an invaluable tool to greatly improve worker safety. We've now included enhanced safety features such as the '**man-down**' and '**check-in**' event which monitors for any periods of inactivity and can trigger an alert.

MAN-DOWN : Monitors for any period of in-activity and sends an alert if the user fails to respond.

CHECK-IN : Ask the user to 'check-in' every 20 minutes (or whatever time scale you set) to make sure they are OK. Failure to check-in will trigger an alert.

WHY USE webeyeSOS?

Recognised as 'the world's best cloud security software' it is designed with the stability to provide a solution to reliability problems the competition fail to disclose.

Most cloud-based systems make claims but we have unprecedented checks and balances to deliver on our promises. Part of the software is the PADARC (Progressive Alarm Delivery and Alarm Response Confirmation) which means when we know you know. Should any part of the delivery fail it's programmed to bypass the fault and move to an unprecedented number of back-up systems to make sure you receive the alert.

You may not be aware how unstable most of the competition can be but webeyeSOS is the only cloud based platform to boast a 99.9% reliability record. webeyeSOS is fully audited so you'll know when and who answered the alert. Given the potential life-threatening importance of certain alarms it is dangerous to rely on old "Send and Forget" type technologies.

KEY BENEFITS.

ALARM TRANSMISSION

GPS location sent to cloud platform

EASY SETUP

Available at Apple's or Google store

GPS & DATA CHECK

Realtime system status notifications

KEYPAD OVERRIDE

Raise the alarm quickly

AUDIO CLIP

Record and transmit 10 sec audio clip

SECURE LOGIN

Designated users only

STATUS SCREEN

immediately view system status

FULL AUDIT TRAIL

All activity recorded to a secure server

HELP MENUS

Comprehensive help system

THE MOST COST EFFECTIVE, SECURE AND RELIABLE CLOUD BASED GUARD & LONE WORKER MONITORING SYSTEM ON THE MARKET.
